

# FIELD-LEVEL VISIBILITY

Powered By **Data Science**

CLIMATE | BASIC™

**See field conditions across your entire operation from anywhere.** Climate Basic™ provides you with field-level weather data, notifications and scouting tools so you can have field-level visibility into current and future field conditions to make timely operations decisions anytime, anywhere.

## Field-Level Weather

View historical, real-time and forecasted weather at the field level (hourly + daily)

- Decide which fields are workable based on precipitation and wind speed
- Inform operational decisions using Future Radar
- Look for trends using weather data from the past 30+ years

## Notifications

Keep an eye on changing conditions with automatic alerts

- Start every day with an email report of 24-hour precipitation totals
- Receive a text notification when hail is detected in a field

## Scouting

Capture/share geo-located images and notes for things like pests and disease

- Identify areas of interest and navigate back to them
- Quickly capture notes in the field to save or share
